

**TRANSPORTATION Department**  
**ACTIVITY REPORT**  
**SEPTEMBER TO NOVEMBER 2025**

---

The Transportation Department is responsible for the safe and secure management of 14 certified airports, 14 marine ports, the Usijit para-transport and public transit services, and the Off Highway Vehicle (OHV) awareness program in Nunavik.

**Staffing**

Please see Appendix A for listing of departmental employees.

**Training**

We are actively recruiting for vacant Observer Communicator (OC) positions for Umiujaq, Salluit, Quaqtuq and Akulivik. Currently, Dorina Aragutak from Umiujaq is undergoing in-house OC training in Kuujuaq. Dorina is on track to becoming a full-time OC by December.

Beneficiaries from Umiujaq, Salluit, and Akulivik are encouraged to apply for the open OC positions. Those shortlisted will complete our internal OC training program and then receive site certification training at their local Community Aerodrome Radio Station (CARS).

Two of our staff, Lazarusie Grey and Qirnulau Rochefort, recently completed Possession and Acquisition License (PAL) training for firearms used in managing wildlife.

We are actively looking to hire a training consultant to supplement our effort to close training gaps.

**Operations**

Full-time OC positions in Umiujaq, Quaqtuq, Salluit and Akulivik CARS are still vacant. These CARS are mostly covered by rotational OCs, and occasional closures due to vacancies are reported to the Ministère des Transports et de la Mobilité Durable (MTMD) and other users through emails and Notice to Airmen (NOTAMs) as required by the Sivunirmut Agreement.

## Wildlife Management

Recent wildlife observations at our airports indicate an increased presence of crows and ravens, consistent with normal seasonal patterns. This uptick is partly linked to nearby landfills and unattended cargo, which attract these species. The rise in corvid activity typically corresponds with a decrease in gull sightings. However, gulls continue to be reported in significant numbers at Kuujjuarapik, Akulivik, Ivujivik, and Quaqtac where landfills are close to airport boundaries.

Geese remain prevalent during the autumn migration period, particularly at airports along the Hudson coast, including Akulivik, Puvirnituc, and Inukjuak. To mitigate associated wildlife hazards, NOTAMs have been issued, and airport maintenance teams have increased runway inspections. Wildlife control measures such as the use of pyrotechnics (bangers) and authorized bird harvesting are being carried out in accordance with approved wildlife management permits.

A modest increase in dog and fox activities has also been observed at our airports. In response, we have implemented measures including fence and gate repairs, fox capture, enforcement of the No Feeding Wildlife Policy, and the marking of dogs with paintball guns to support identification and monitoring.

## Environmental Management

Environmental assessments were conducted in Kuujjuarapik, Umiujaq, Ivujivik, and Aupaluk to delineate areas potentially impacted by historic spills. As part of these activities, observation wells for groundwater and surface water were installed to monitor potential migration of residual contamination.

A major cleanup of old dust suppressant totes was completed at Puvirnituc airport. Approximately 200 totes containing oily water were prepared and transported to the marina for shipment to South via marine transport for safe and compliant disposal. An additional 80 totes were relocated to the marina for lateral transport to Kuujjuarapik. About 70 empty totes remain on site, posing no environmental risk, and are scheduled for recycling next summer.

Annual environmental inspections have been completed at all airports. Key findings primarily involved heating oil tanks and the storage of hazardous materials, all of which have been addressed. Fence conditions were also inspected and documented, and residual materials from garages were prepared for sealift transport to South for final disposal in accordance with applicable regulations.

## Infrastructure and Projects

Here is an update on 2025 Summer projects:

- **Puvirnituc:** Resurfacing and stabilization of aircraft movement areas completed. In September, identified deficiencies were addressed by MTMD in collaboration with our maintainers. Working with our staff and a consultant, the MTMD will return next year to restabilize the runway surface.
- **Salluit:** Replacement of fence sections, and repair of culverts completed
- **Quaqtac:** Resurfacing of aircraft movement areas, and installation of guardrails on access road completed

- **Aupaluk:** Resurfacing of movement area, repair of fence sections, addition of Precision Approach Patch Indicators (PAPI), a runway exit sign and repair of transit house completed
- **Kangirsuk:** Geotechnical drilling completed
- **Ivujivik:** Geotechnical drilling completed

We continue discussions with Transport Canada on a request to fund development of an airport master plan for the Kuujuaq airport.

### **Marine Port Management**

The M30 review process on Transport Canada's Ocean Protection Plan (OPP) program is complete. We will proceed with implementation of the agreement immediately when signed by the KRG and Transport Canada. Funding from the OPP program will be used to supply and install portable lighting, develop emergency plans, purchase containers with emergency supply kits, and provide training at all 14 airports.

Terms of reference for the hiring of an engineering firm to conduct a marine feasibility study has been completed, and a call for proposal has been launched. We hope to award the contract to an engineering firm before the end of the year or at the latest in January 2026.

### **Safety & Regulatory**

Full-scale and tabletop emergency exercises were successfully completed at all airports, except for Puvirnituk. Coordination with the Airport Manager is underway to ensure the emergency exercise is completed by the end of November. A summary report is presented in Appendix B.

The Corrective Action Plan (CAP) resulting from the recent Quality Assurance Audit has been developed, and data entry into the Akila SMS platform is ongoing. This process involves the integration of over 400 individual entries while maintaining focus on critical operational and safety priorities.

Transport Canada has completed the 2025 Program Inspection for Kuujuarapik, Umiujaq, Salluit, Quaqtaq, Kangirsuk, Tasiujaq, and Kangiqsualujuaq airports. All requested documentation has been submitted to Transport Canada, and we await evaluation results and related findings.

### **Bus Statistics**

Recording daily bus ridership statistics is required to receive operational funds from MTMD. See Appendix C for year-to-date ridership.
