VEHICLE BATTERY RECYCLING PROCEDURE

Step 1: Prepare crates for adequate packaging and pile up the batteries in the crates. Do the inventory (count how many batteries per crate).

Step 2: Contact KRG environment in order to make arrangements with the battery recycler & fill out a dangerous goods declaration.

Step 3: Contact a Sealfit company (Degagnés or Near) for reservations. The NV will pay for the transport to Montreal and will be reimbursed by the battery recycler when they receive the shipment.

Step 4: Make sure your crate respect the marine transport regulations.

Transport Regulations

1. Build a crate on pallet. Install a membrane (tarp) at the bottom and on the sides of the crate.
2. **Protect the battery terminals** with tape to avoid short circuit. Install the batteries in the crate so they cannot move.
3. If needed, start a second layer. Separate each layer with a plywood supported by a piece of wood install in between the terminals. The terminals should not support the weight of the stacked batteries. **2 layers maximum.**
4. Secure the crate with 3/4" metal straps held vertically.
5. Make sure you put a corrosion sticker on each side on the bulk bag.
6. Make sure you have the dangerous goods declaration before making the ship reservations.
